

Traditional MVC

Traditional MVC

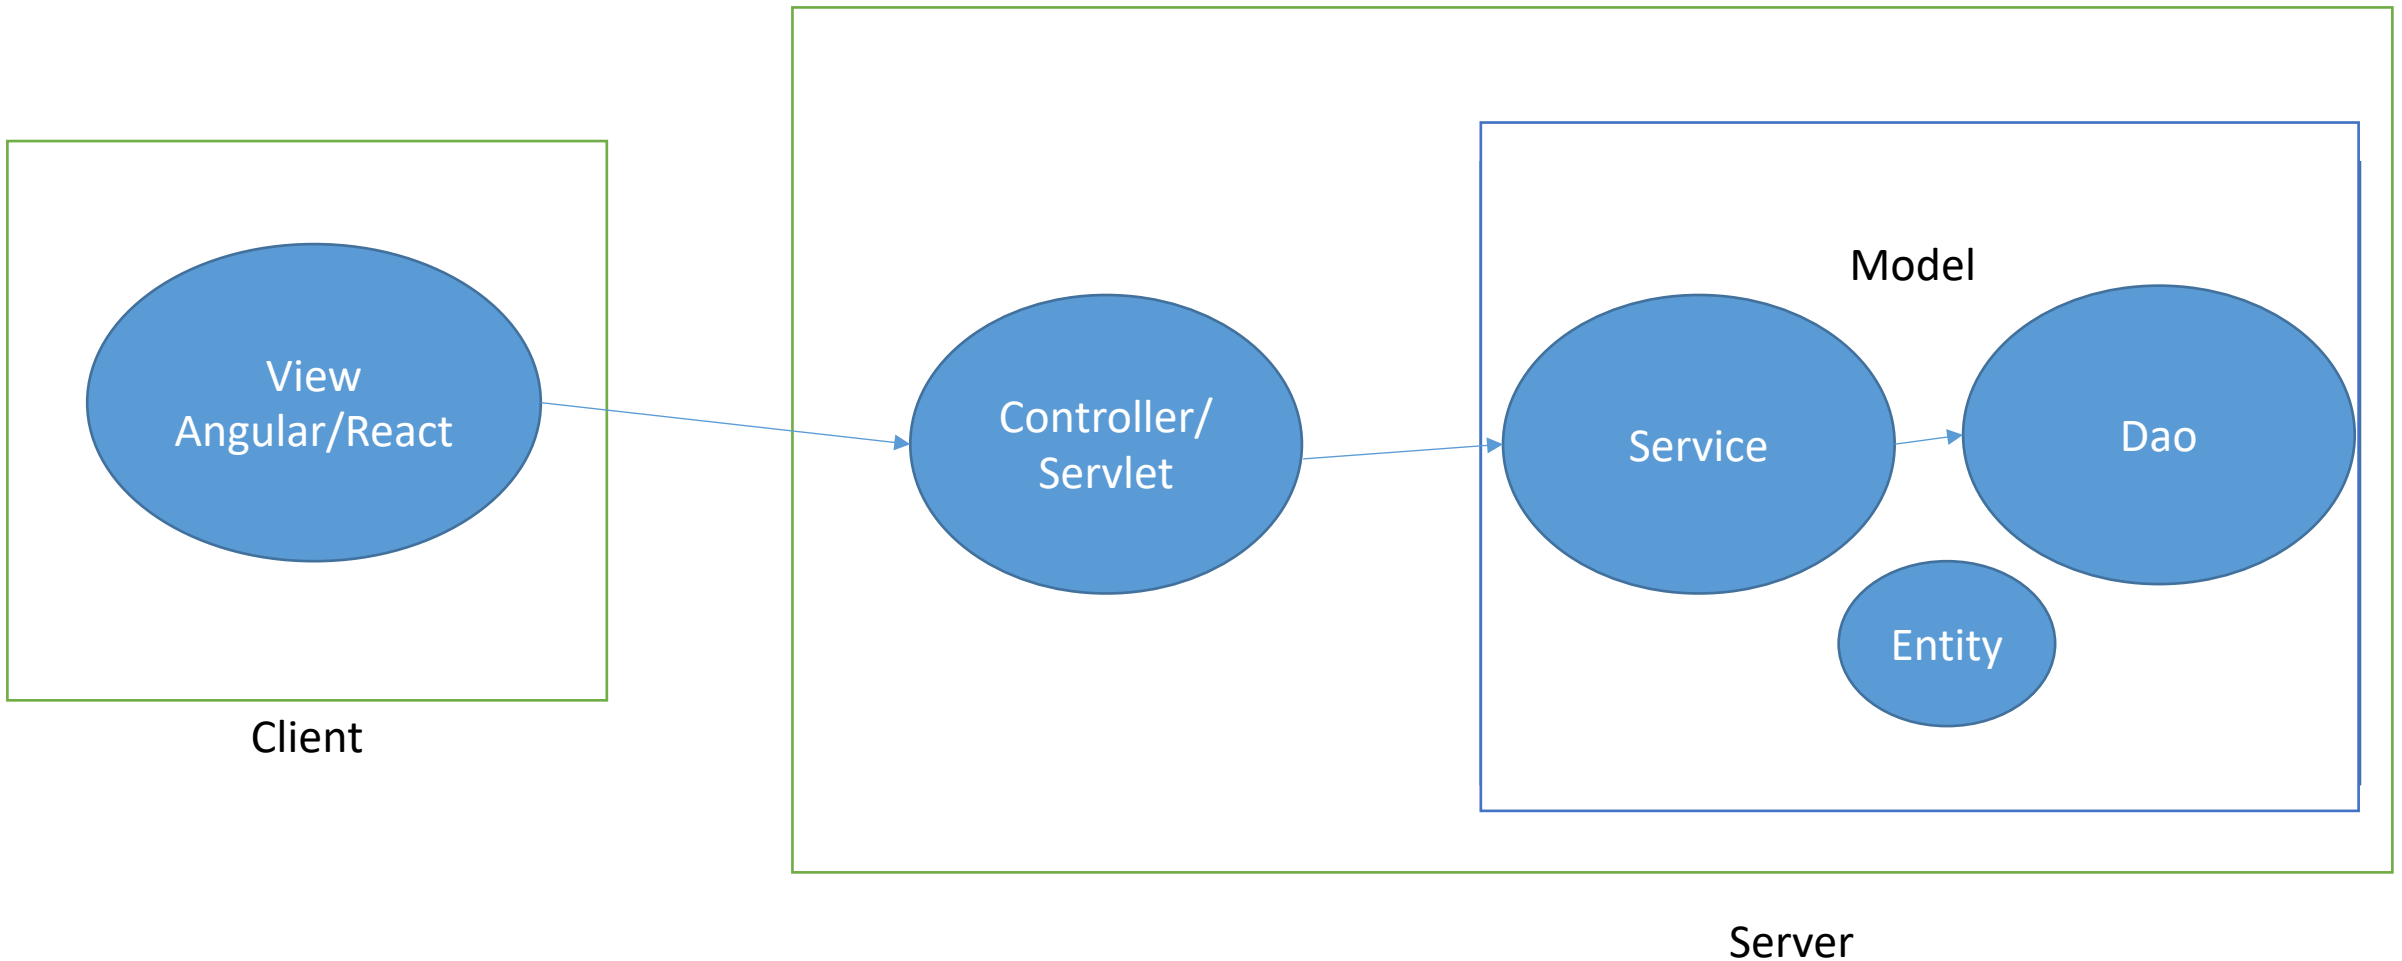

The problem is in Traditional MVC(20yrs old approx.) architecture, everything happens on the Server

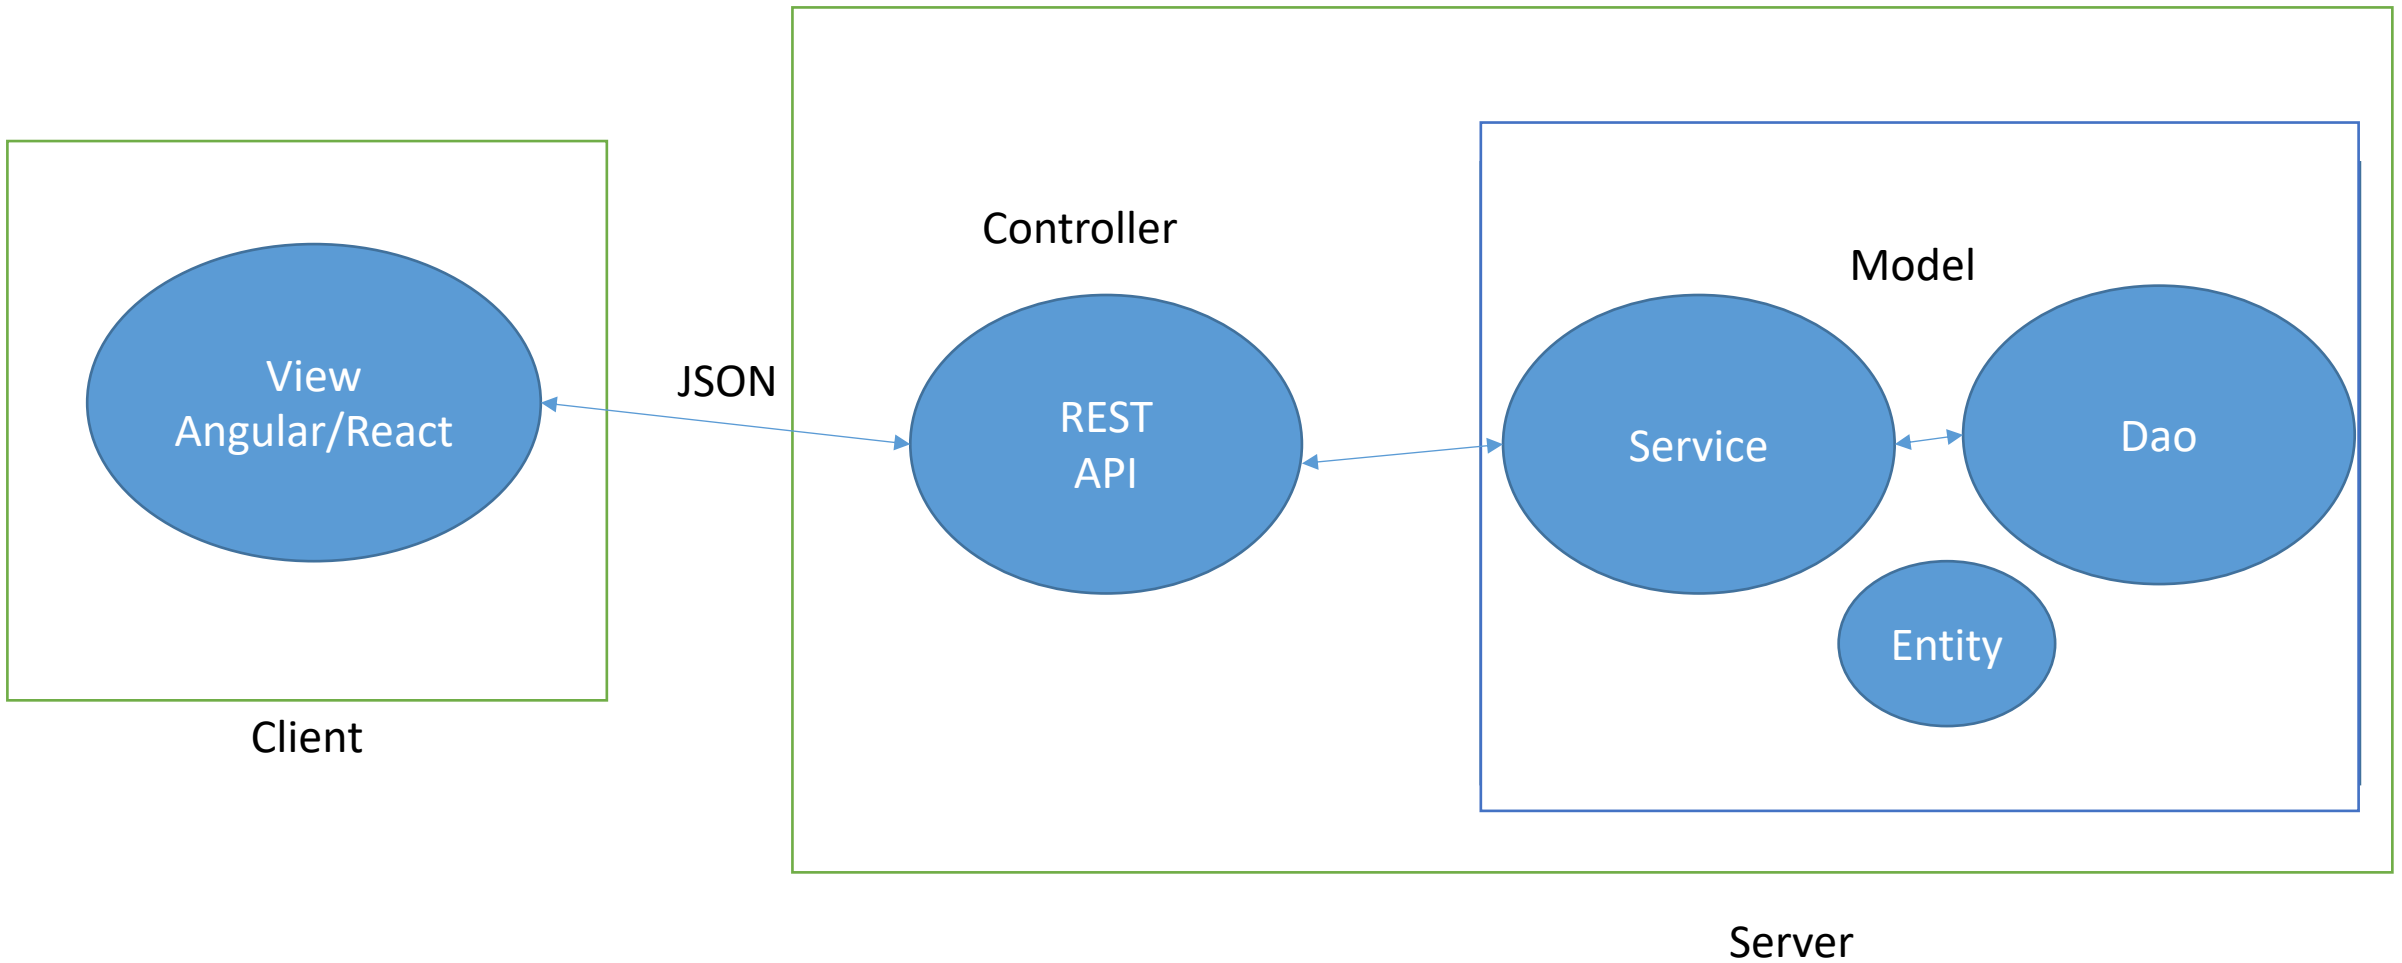

Modern MVC:

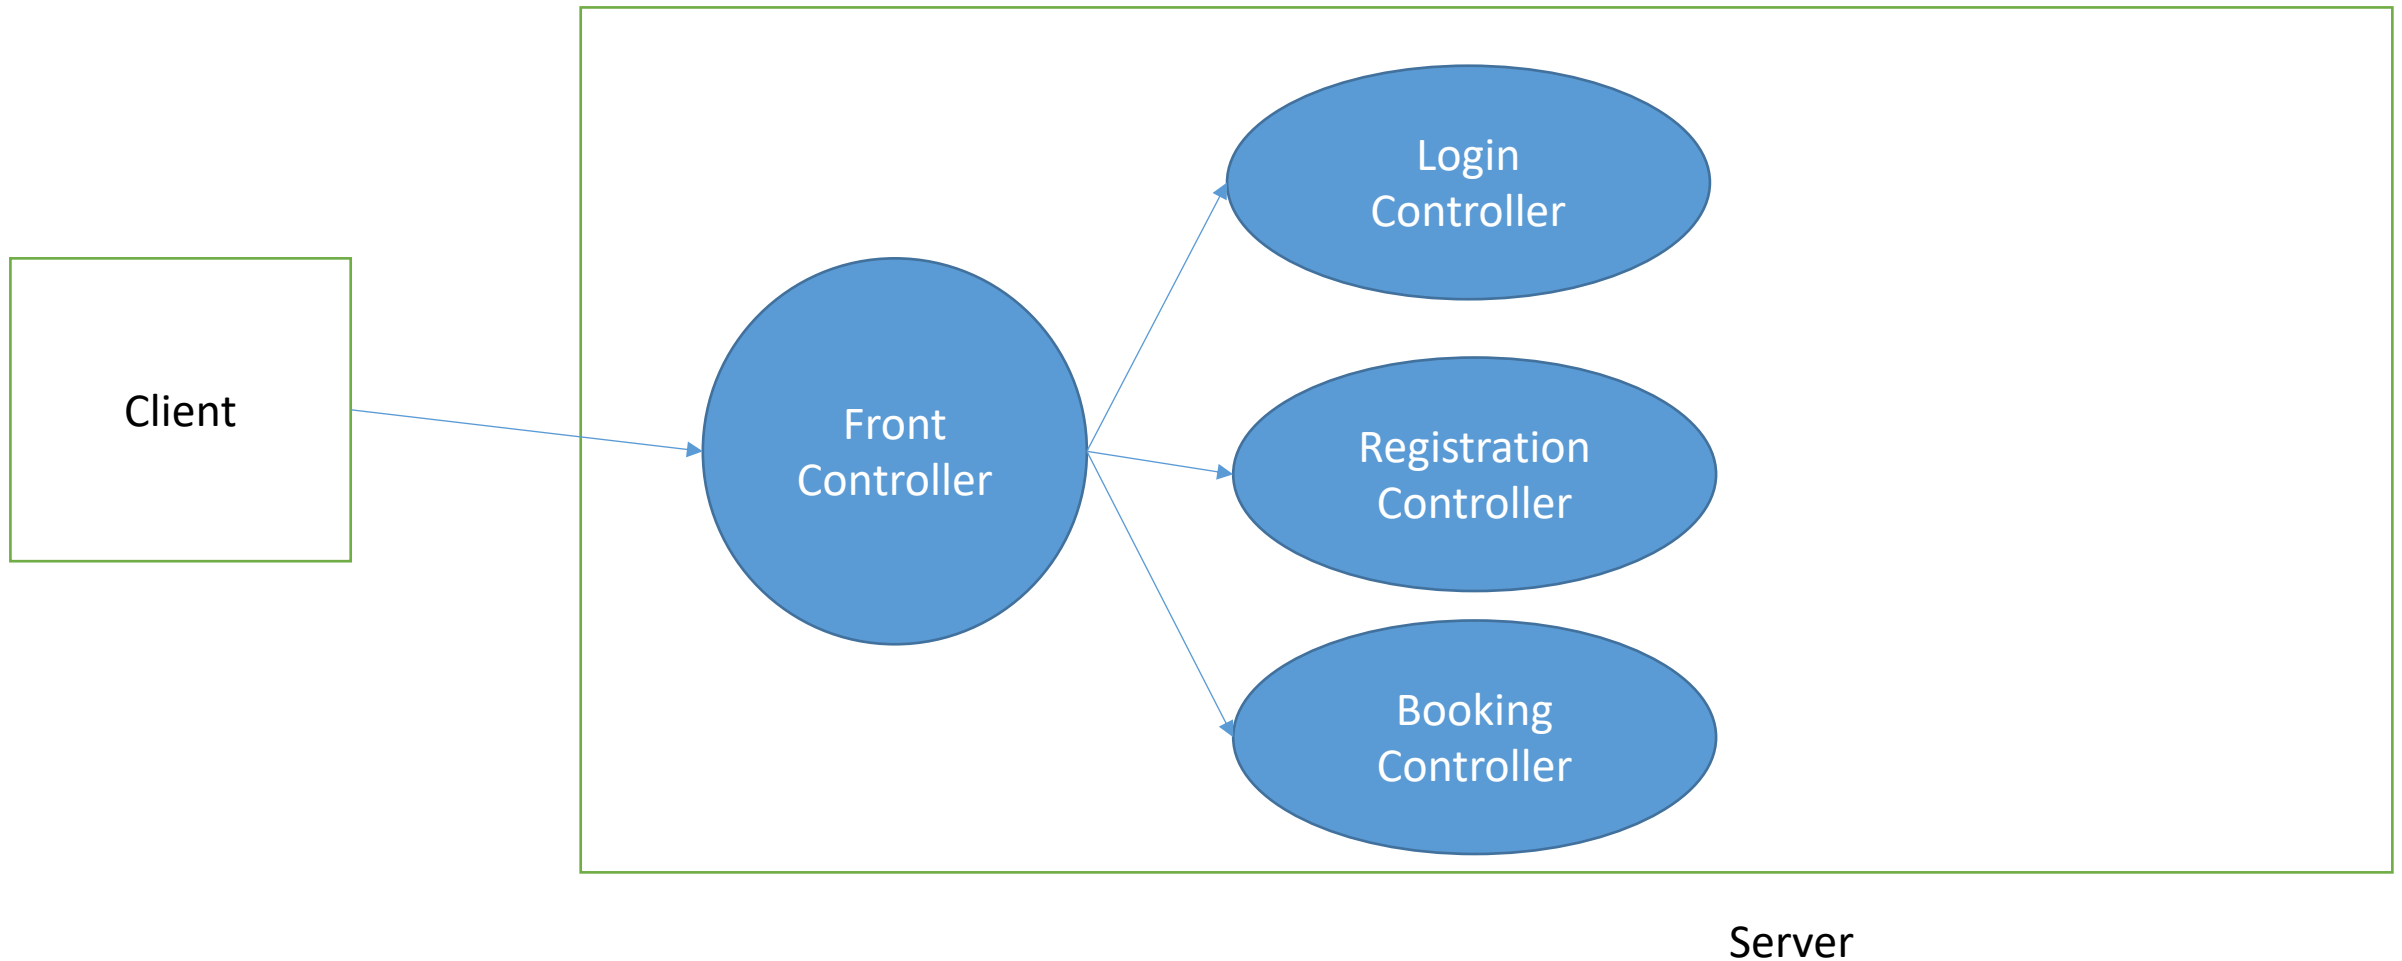

Views are managed using JavaScript based frameworks

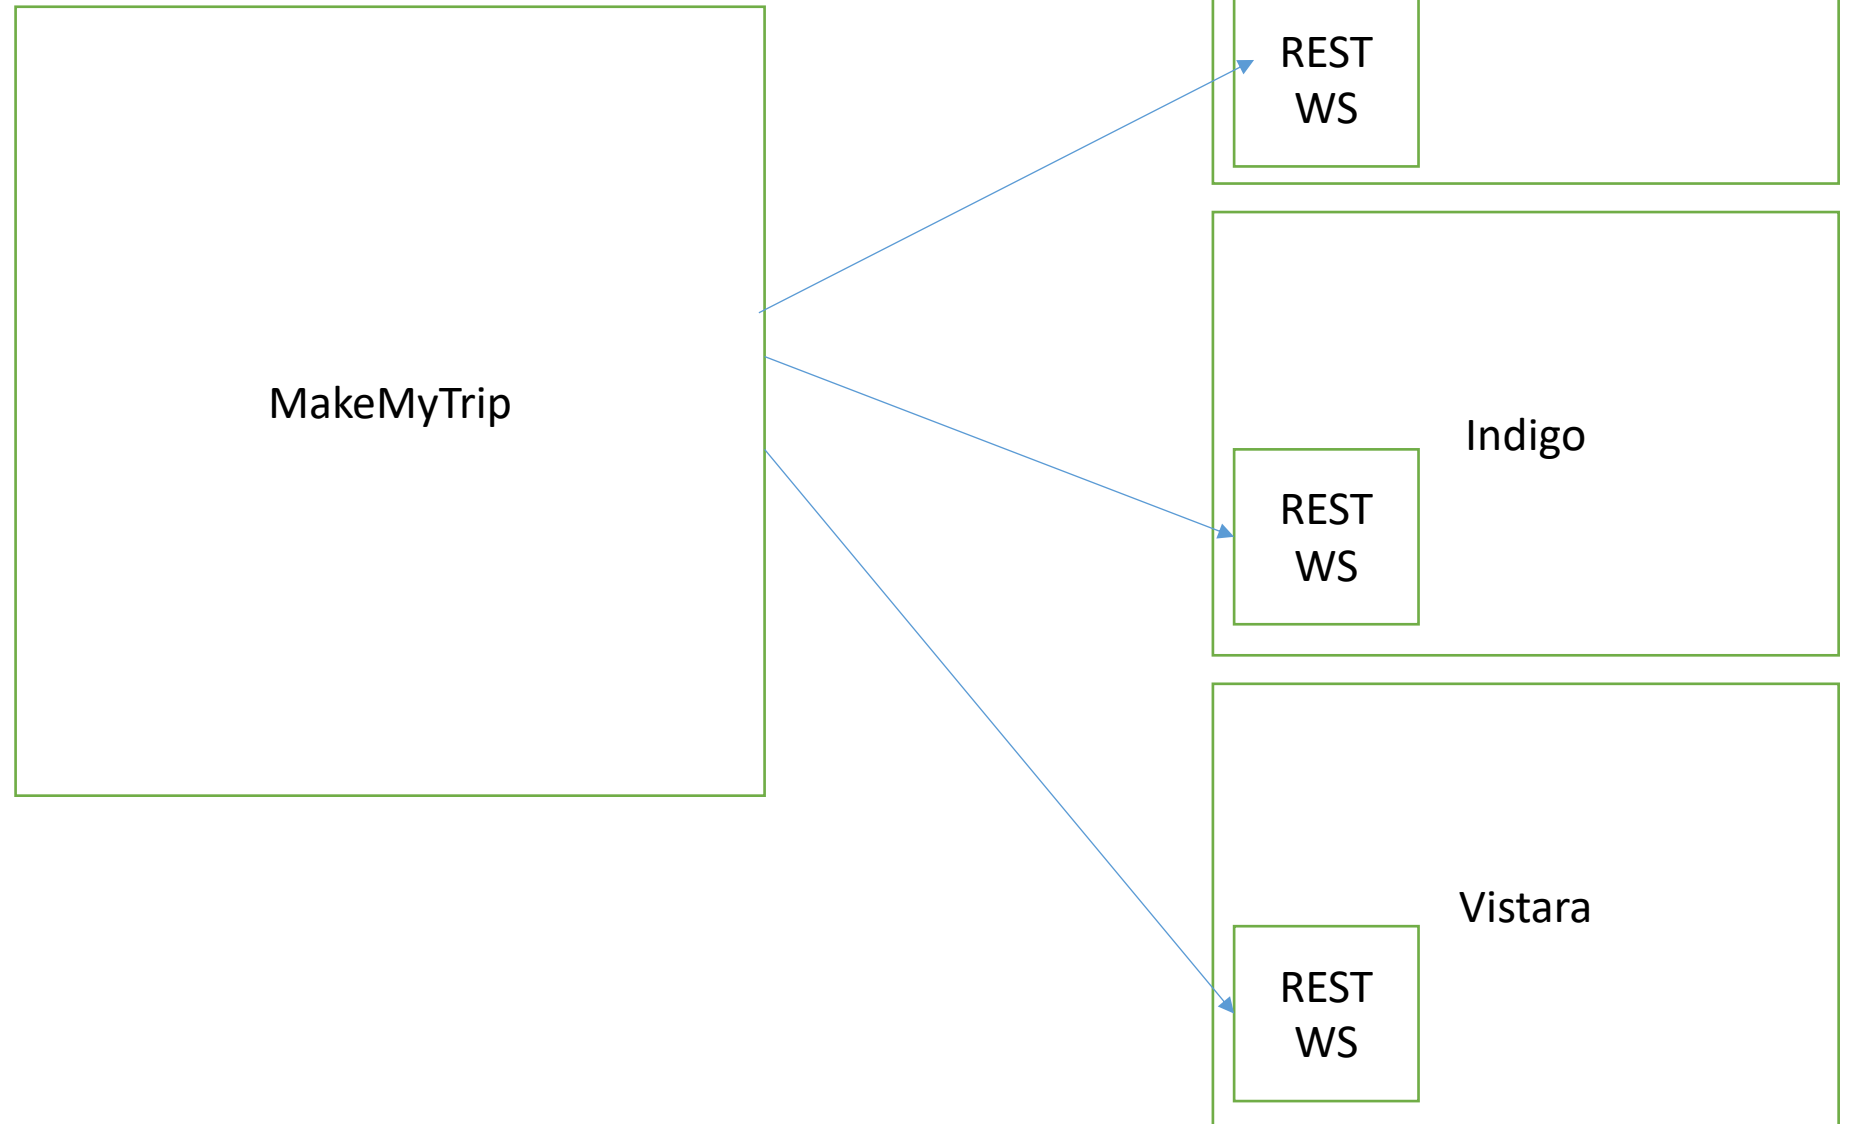

Modern MVC:  
Views are managed using JavaScript based frameworks

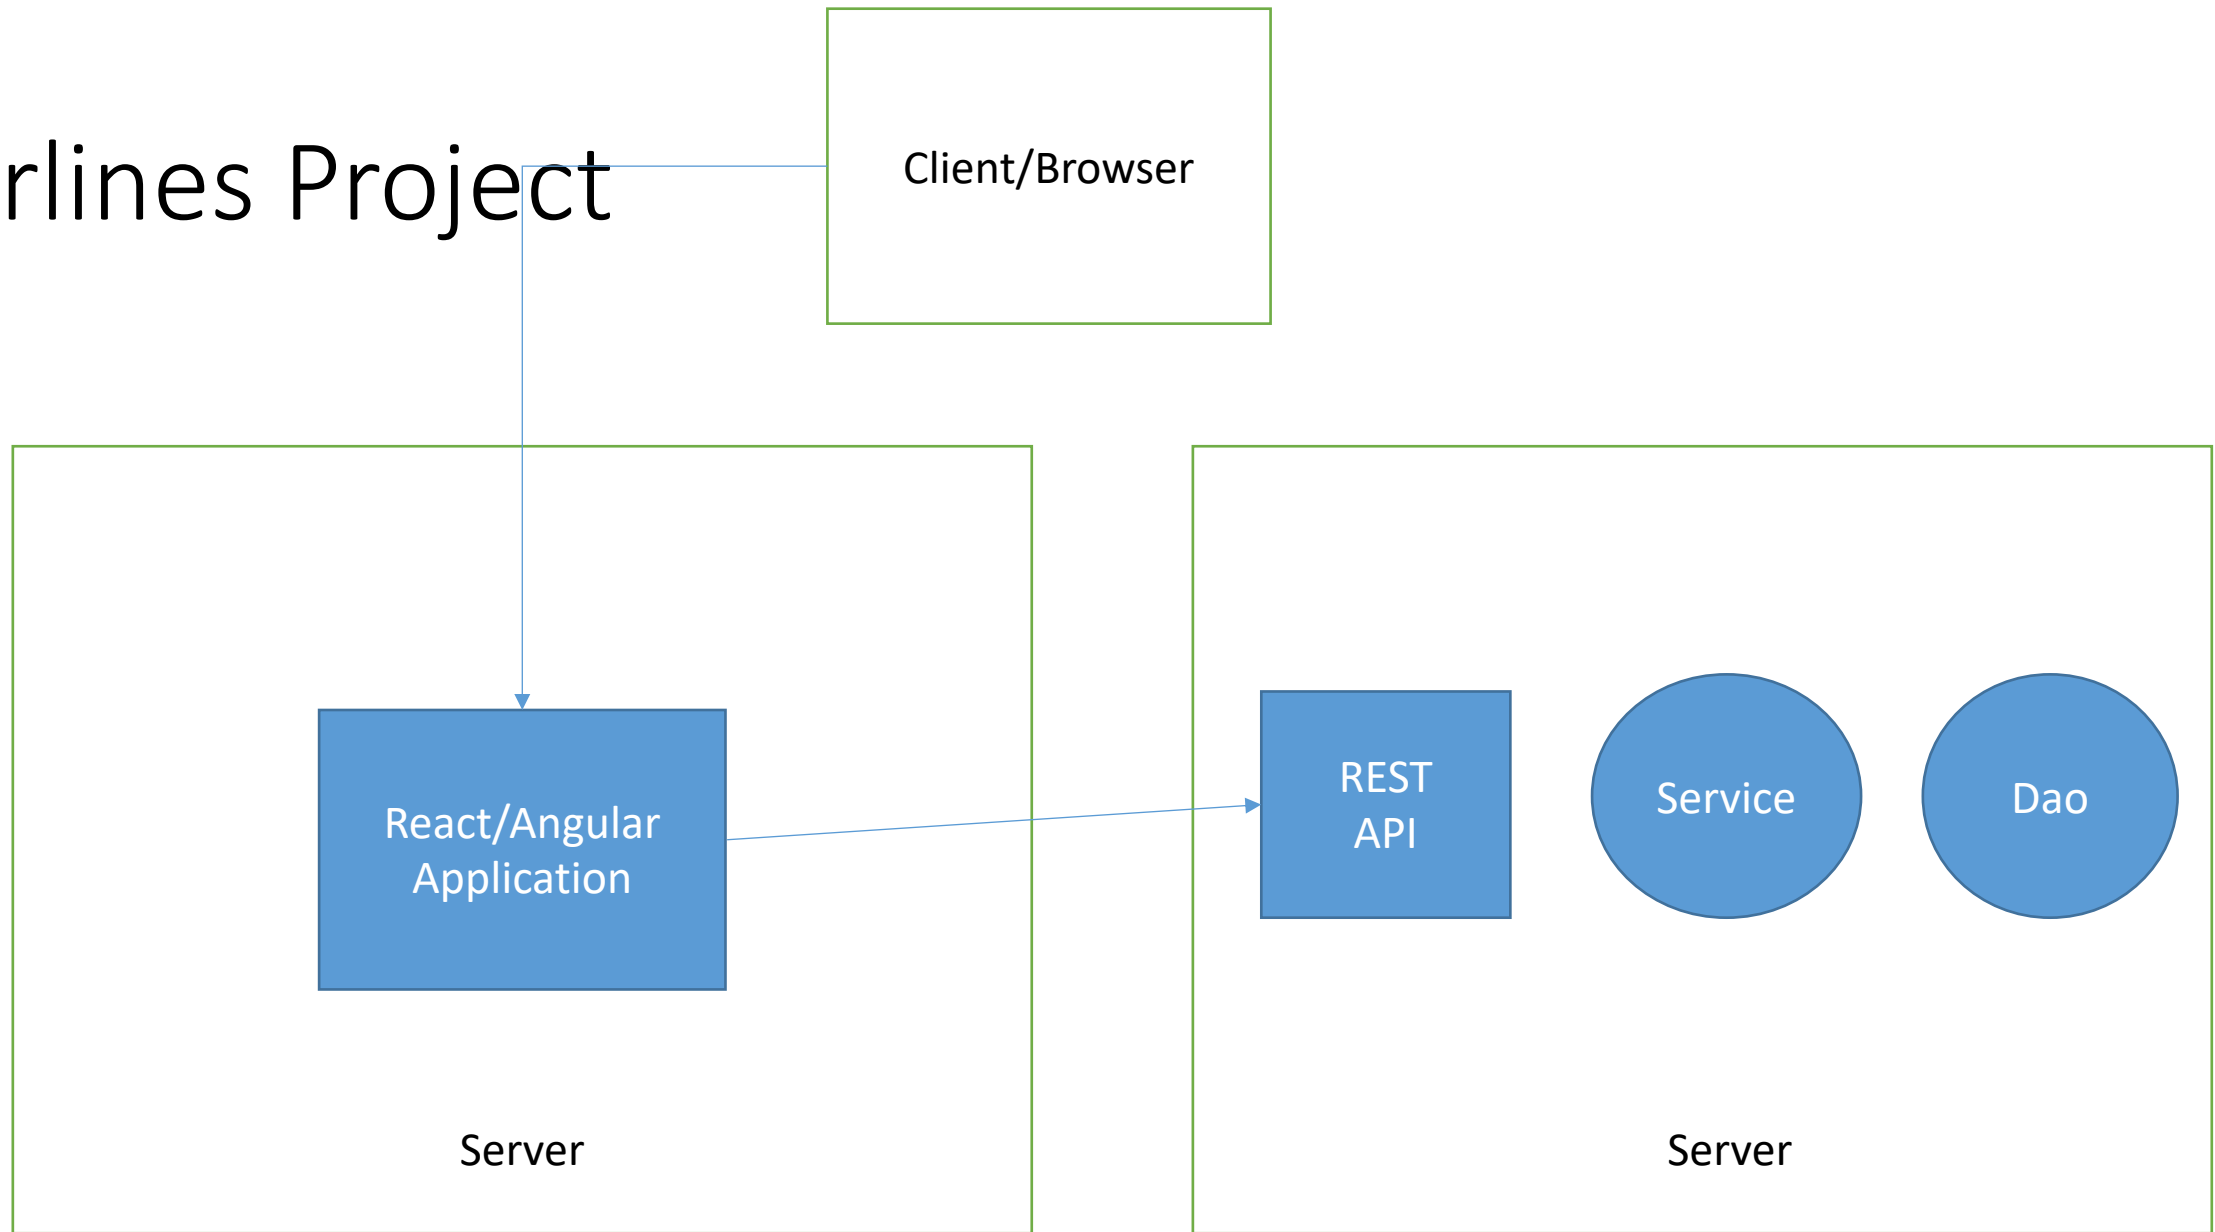

## Spring MVC setup

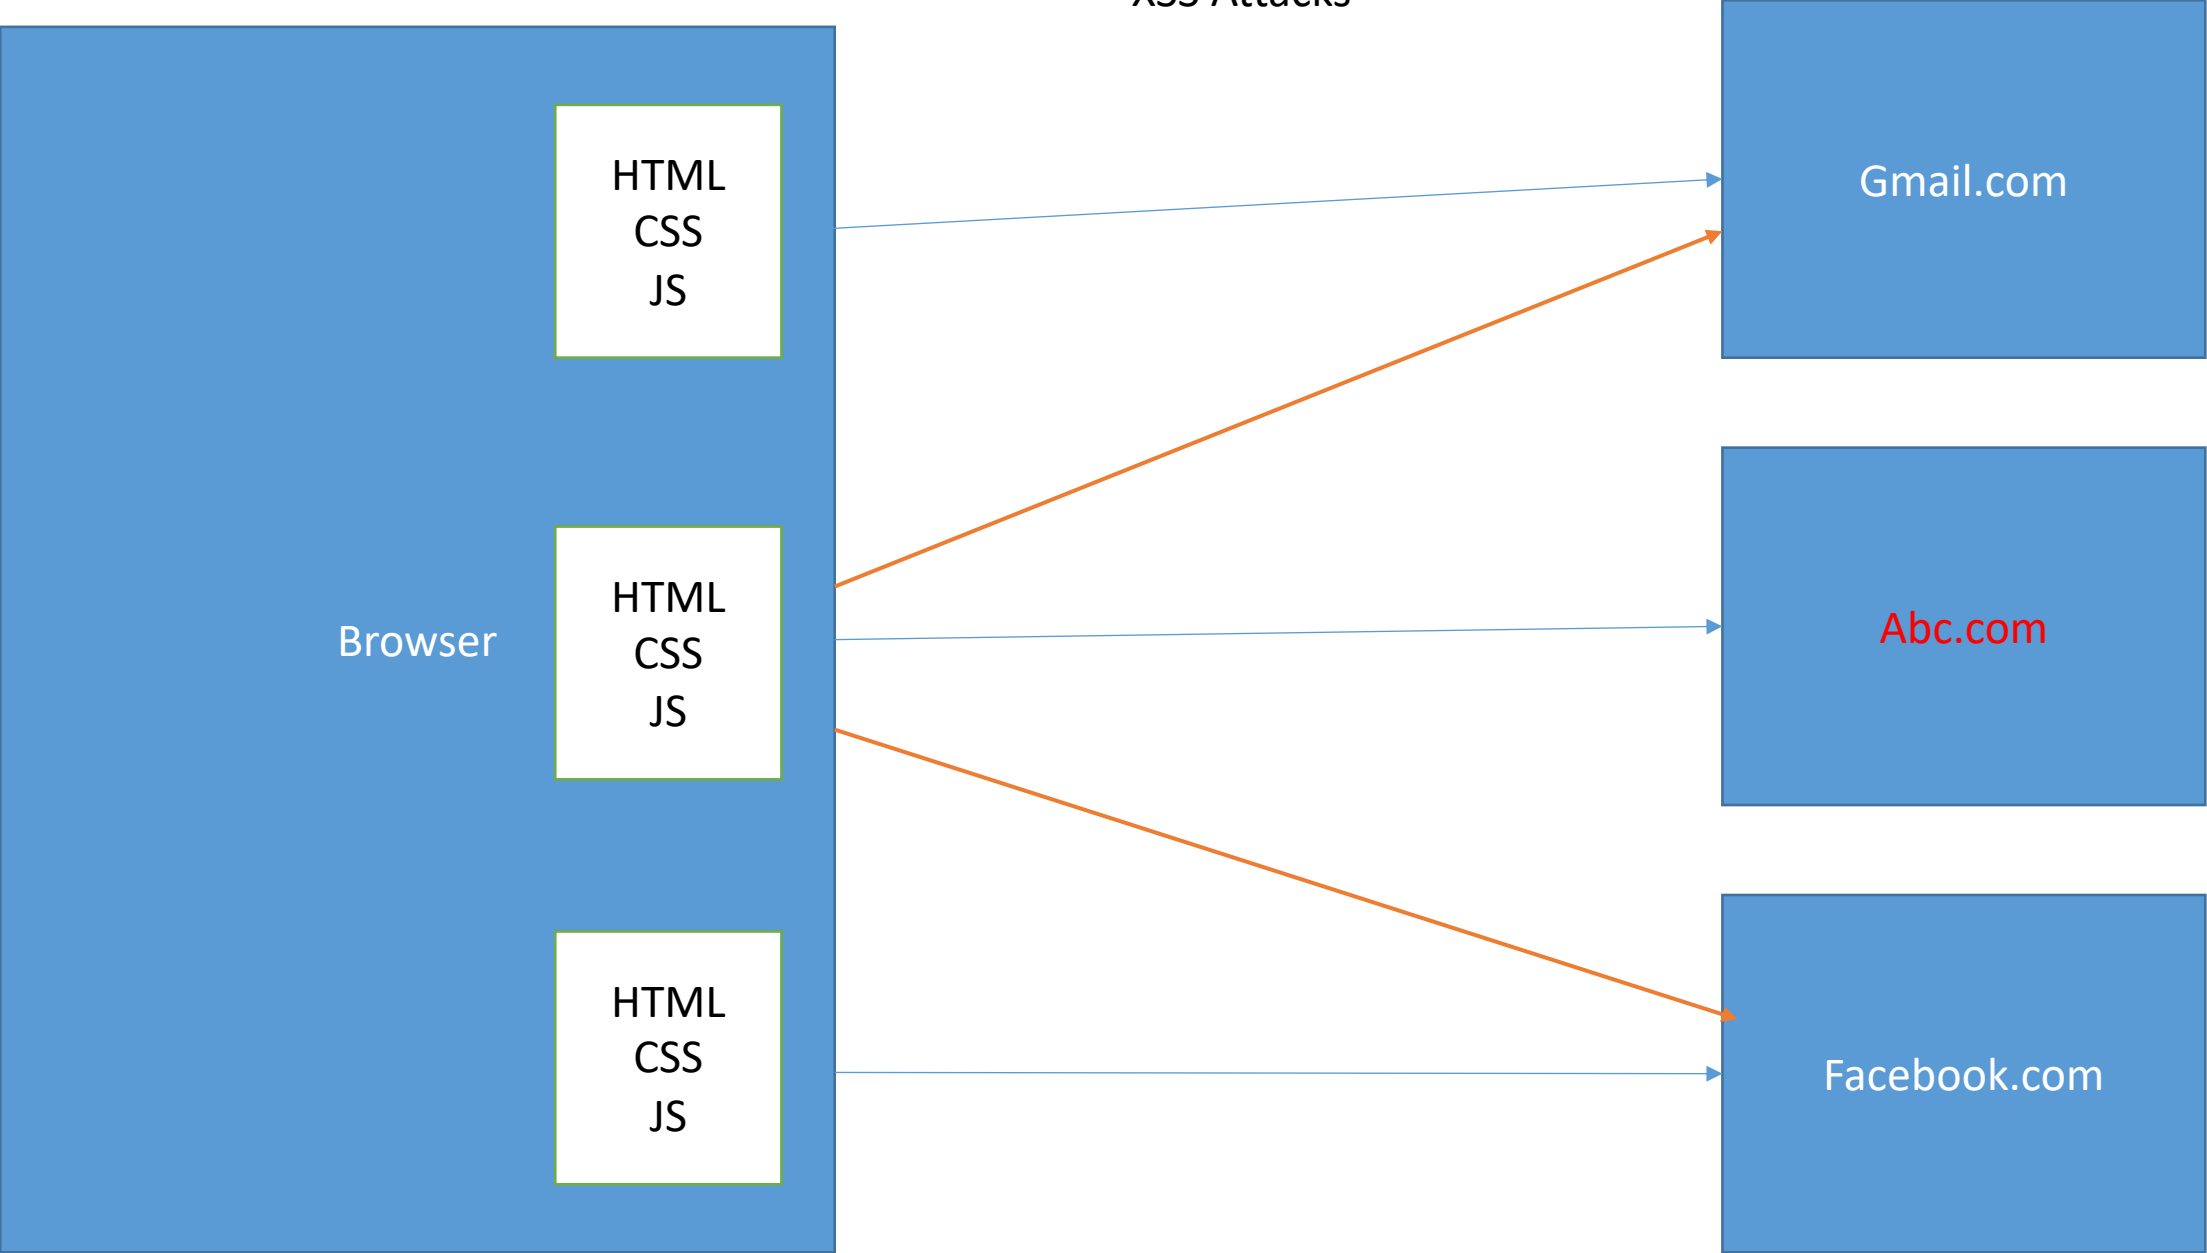

# Airlines Project

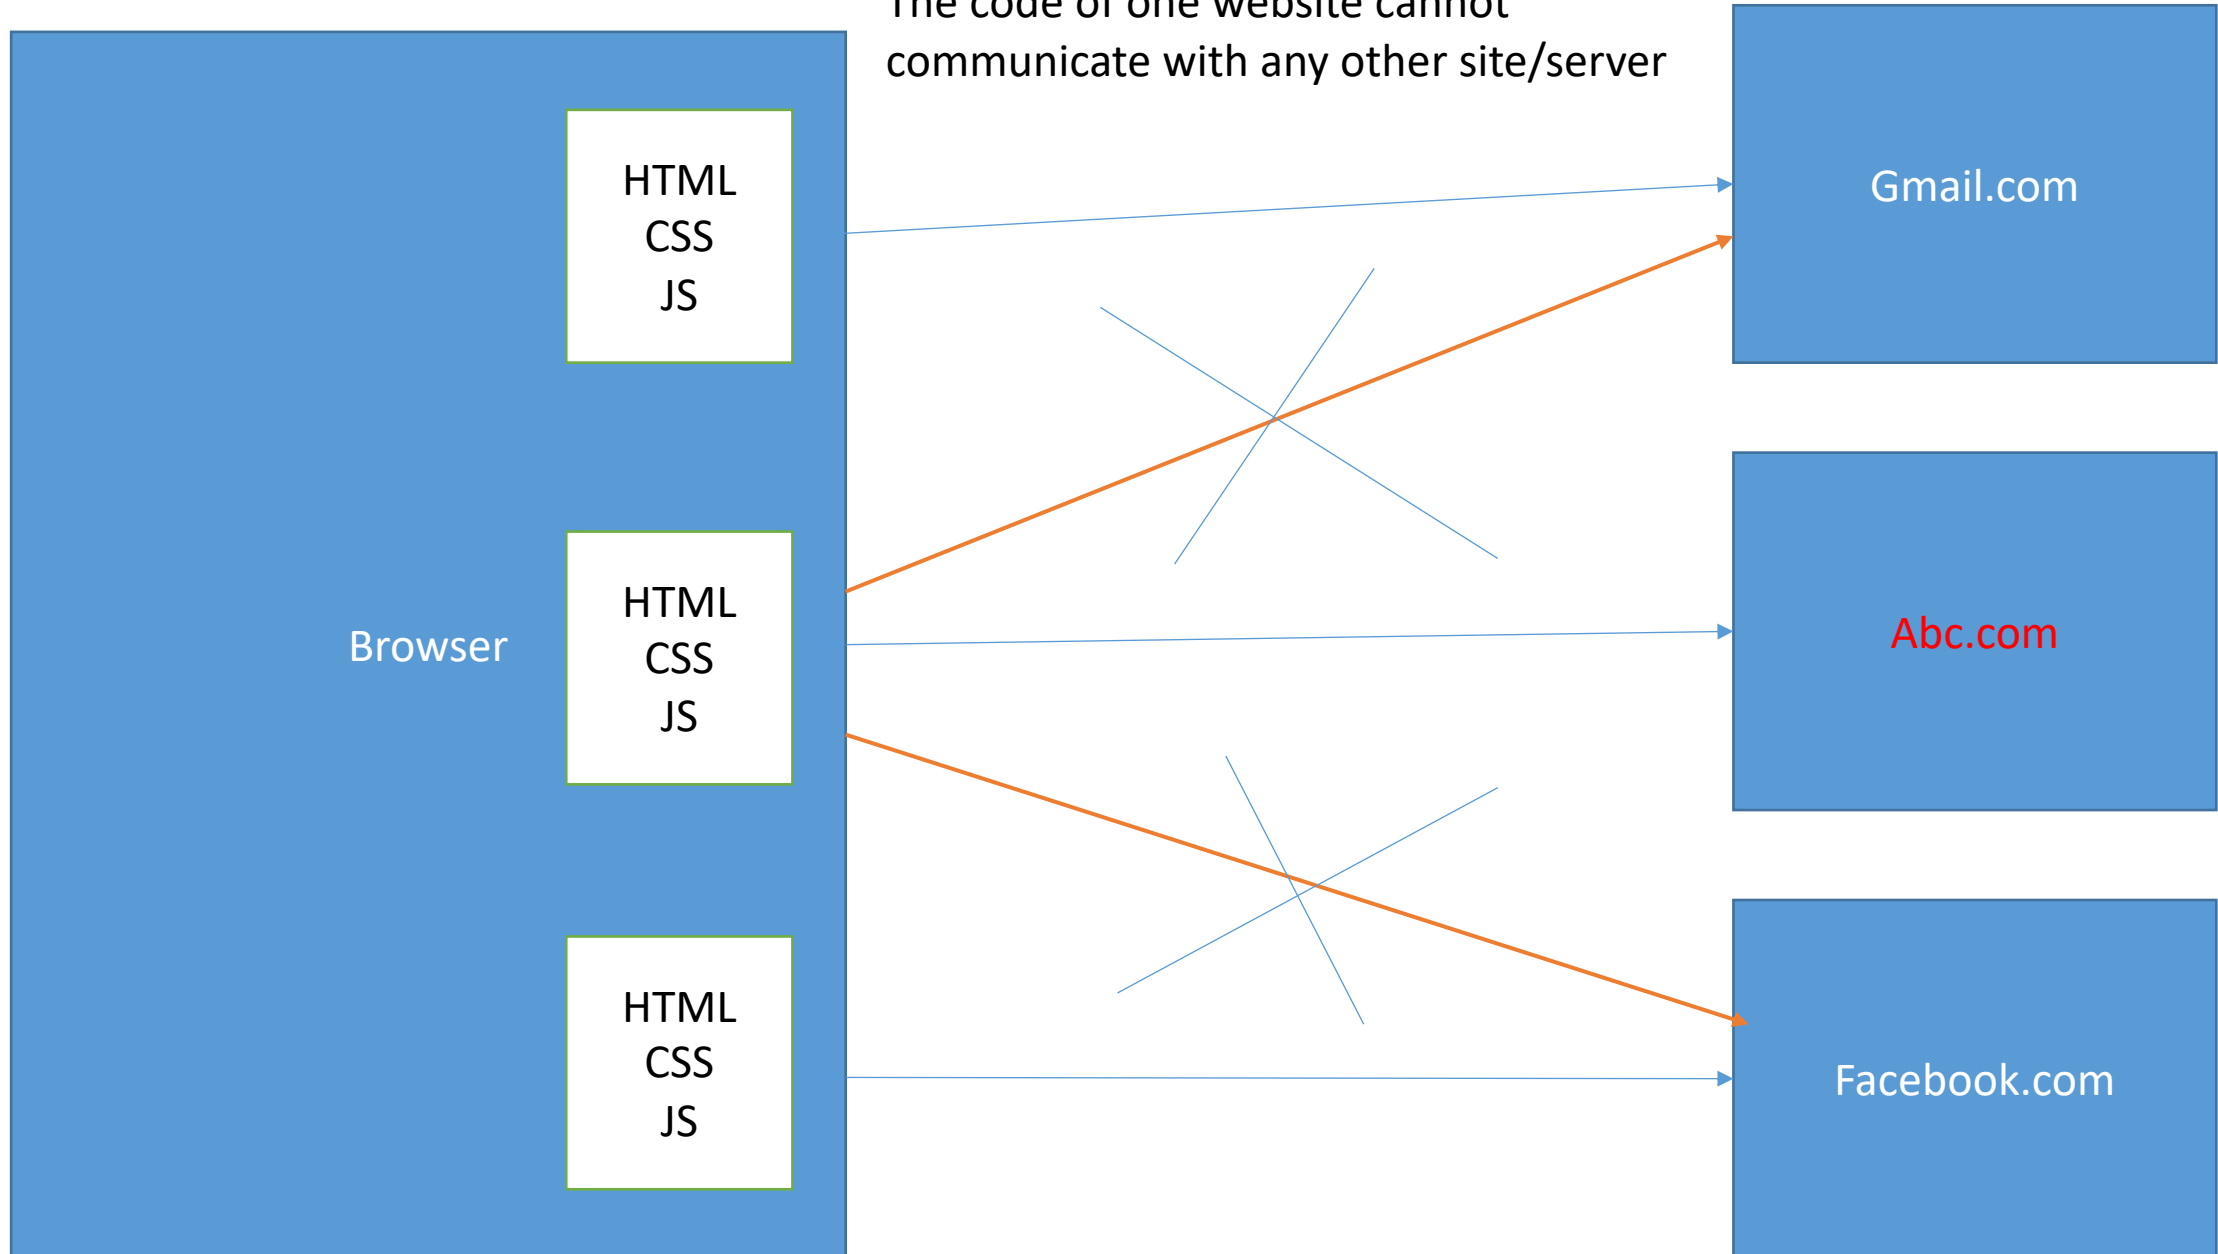

XSS Attacks

SOP (Same Origin Policy)  
The code of one website cannot  
communicate with any other site/server

SOP (Same Origin Policy)  
The code of one website cannot  
communicate with any other site/server

But what if we want to achieve this for a  
genuine reason

The solution it to use CORS
